# 1 APSPlatformService

This is a trivial little service that just returns meta data about the specific platform installation.

The returned information is configured in the */apsadminweb*.

## 1.1 APIs

---

```
public class PlatformDescription [se.natusoft.osgi.aps.api.core.platform.model] {
```

This model provides information about a platform installation.

```
public PlatformDescription()
```

Creates a new PlatformDescription.

```
public PlatformDescription(String identifier, String type, String description)
```

Creates a new PlatformDescription.

*Parameters*

*identifier* - An identifying name for the platform.

*type* - The type of the platform, for example "Development", "SystemTest".

*description* - A short description of the platform instance.

```
public String getIdentifier()
```

Returns the platform identifier.

```
public String getType()
```

Returns the type of the platform.

```
public String getDescription()
```

Returns the description of the platform.

```
}
```

---

```
public interface APSPPlatformService [se.natusoft.osgi.aps.api.core.platform.service] {
```

Provides information about the platform instance.

```
public PlatformDescription getPlatformDescription()
```

Returns a description of the platform instance / installation.

```
}
```
