1.1 APIs	1

# <sub>1</sub> APSPlatformService

This is a trivial little service that just returns meta data about the specific platform installation.

The returned information is configured in the /apsadminweb.

# 1.1 APIs

```
public class PlatformDescription [se.natusoft.osgi.aps.api.core.platform.model] {
```

This model provides information about a platform installation.

#### public PlatformDescription()

Creates a new PlatformDescription.

#### public PlatformDescription(String identifier, String type, String description)

Creates a new PlatformDescription.

#### **Parameters**

```
identifier - An identifying name for the platform.
```

```
type - The type of the platform, for example "Development", "SystemTest".
```

description - A short description of the platform instance.

#### public String getIdentifier()

Returns the platform identifier.

# public String getType()

Returns the type of the platform.

#### public String getDescription()

Returns the description of the platform.

}

public interface APSPlatformService [se.natusoft.osgi.aps.api.core.platform.service] {

Provides information about the platform instance.

# public PlatformDescription getPlatformDescription()

Returns a description of the platform instance / installation.

}
